

THE PLAN-VERSUS-REALITY LAYER FOR AI-BUILT SOFTWARE

Sage 7

Does what you built match what you planned?

AI builds fast. Nobody checks what it skipped.

AI tools ship features, not the boring parts: permissions, failure states, database access and privacy basics.

Founders can't tell what's missing until users find it.

Plans and code drift apart, and nobody notices until launch.

98%

of 1,072 vibe-coded apps scanned had at least one security issue

170+

of 1,645 Lovable projects exposed by one database-access flaw (CVE-2025-48757)

Plan it. Build anywhere. Check it against the plan.

01

Discovery

A 14-category interview finds the gaps founders miss.

02

Blueprint

Feature map, tech spec, design system and an AGENTS.md your coding agent can read.

03

Audit

Your repo or live site, checked feature by feature, with coverage shown.

04

Decide

A CTO briefing ranks the fixes. Every call is logged. Every push is tracked.

Built-in honesty: unverified is never shown as a pass.

Specs write the plan. Scanners check the code. Sage 7 checks one against the other.

CATEGORY	EXAMPLES	GAP
Spec-driven tools	Spec Kit, Kiro, Tessel, Augment Intent	Developer-first; spec-to-code drift is manual
Vibe-code scanners	vibeward, vibeAuditor, Ybe Check, \$199+ human audits	Flag code flaws, not gaps against your plan
Sage 7	Interview, plan, audit and decisions in one record	Compares the build to the plan

Four tiers, metered by credits

FREE \$0 1 project, 25 Discovery replies a day, 1 blueprint preview	FOUNDER \$19 3 projects, 80 credits a month	BUILDER \$49 8 projects, 250 credits a month	STUDIO \$129 20 projects, 700 credits a month
---	---	--	---

Audits use real compute, so each one draws credits. Top-up packs start at \$12 for 30 credits.

Buyers: founders building with AI tools, and agencies auditing client builds. Go-to-market: a free launch check, template blueprints and builder-community walkthroughs.

Live today, and what's next

LIVE

- 14-category Discovery interview
- Blueprint, deliverables and AGENTS.md export
- Repo and live-site audit with drift check
- CTO briefing and decision records
- Push activity tracking for connected repos
- Read-only MCP server for coding agents
- Tiered plans and credit billing

NEXT

- Project-bound audits and quick audits
- Database-access and dependency checks
- Design system v2 with reference uploads
- Write access for agents, after security review

TRACTION: 5 signups • 1 paying customer
